 - o 1. Installation
 - o 2. After installation: make a test recording
 - o 3. Preparation before the exam: creating and sharing a Panopto folder
 - o 4. Recording the exam

Instructions for Recording in Panopto (Windows, macOS)

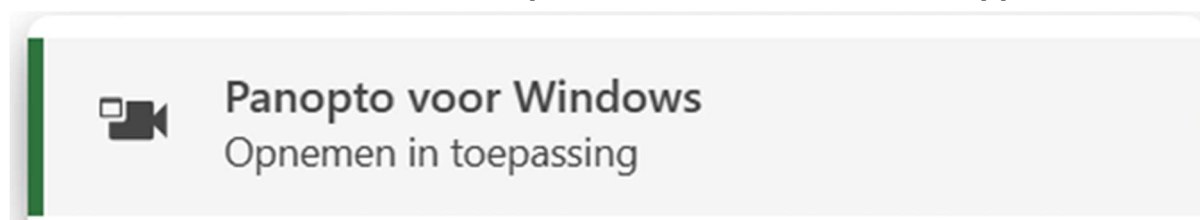

1. Required Software: the Desktop Version of Panopto

The online Panopto Capture is not a usable alternative because in practice it causes too many problems (e.g. completely failed recordings due to even a brief internet outage). You must download the desktop version of Panopto.

1. Go to <https://hogent.cloud.panopto.eu/>
2. Log in with your HOGENT credentials

3. Click on the **+ Create** button in the top left
4. Choose from the menu: **Panopto for Windows / Record in application**

5. A window will open

↓ Een nieuwe sessie opnemen

Panopto openen

Als je Panopto hebt geïnstalleerd, kun je het programma van hieruit openen. Als Panopto niet de laatste versie van Panopto hebt gedownload en geïnstalleerd.

Panopto openen

Panopto downloaden

PowerPoint, video-, en audio-presentaties opnemen. Opnames uploaden naar je Panopto-site en collega's.

Panopto downloaden

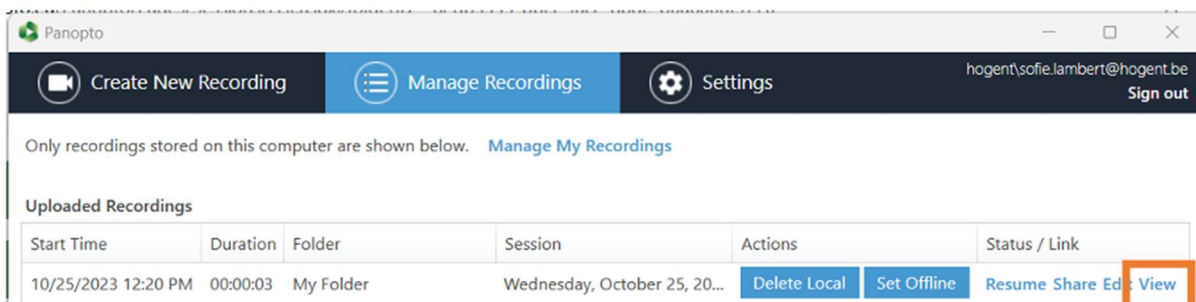

Voor Windows 10 en hoger, 64-bits

[Klik hier voor andere downloadopties](#)

6. Click **Download Panopto** and install the software.

2. After Installation: Make a Test Recording in Panopto

- Open Panopto via the Start menu (locally on your computer).
- Under Primary Sources, choose an **audio source** (no video).
- Under Secondary Sources, check **Capture Main Screen**.
- Press the red **Record** button and make a short test recording.
- Stop the recording by pressing the red button (**Stop**) again.
- You will receive a confirmation of the recording; click **Done**.
- You will automatically be taken to the **Manage Recordings** tab. Once your video has been uploaded, you can click **View** next to the recording.

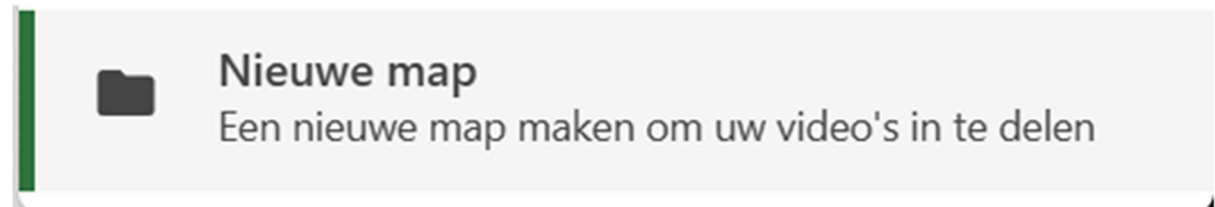

- Review the recording: does it meet the requirements? The full screen must be **visible** and **readable** (sufficient resolution – the image must be **sharp**).
- If everything is in order, you are done with the test recording!

3. Preparation Before the Exam: Creating and Sharing a Panopto Folder

1. Go to <https://hogent.cloud.panopto.eu/>
2. Log in with your HOGENT credentials

3. Click on the **+ Create** button in the top left
4. Choose from the menu: **New Folder**

5. You will see the folder creation window

Map maken

Naam	260113_OOSDI_NaamVoornaam
Bovenliggende map	Mijn map
Beschrijving	

Viewers kunnen de mapomschrijving zien wanneer zij door de mappen en in de viewer op het internet bladeren.

Mapzoekopdrachten omvatten dit veld als er resultaten worden gevonden.

Opties ☐ Machtigingen overnemen van de hoofdmap

De machtigingen voor deze map en alle bijbehorende sessies worden synchroon gehouden met de hoofdmap.

6. Use the correct name for the folder: **<YYMMDD>_<course>_<your surname firstname>**
7. Uncheck the option **Inherit permissions from parent folder**.
8. Click **Create Folder**.
9. You will now see the sharing window.

16. You may now close this window by clicking the X in the top right. The exam folder is ready.

4. Recording the Exam

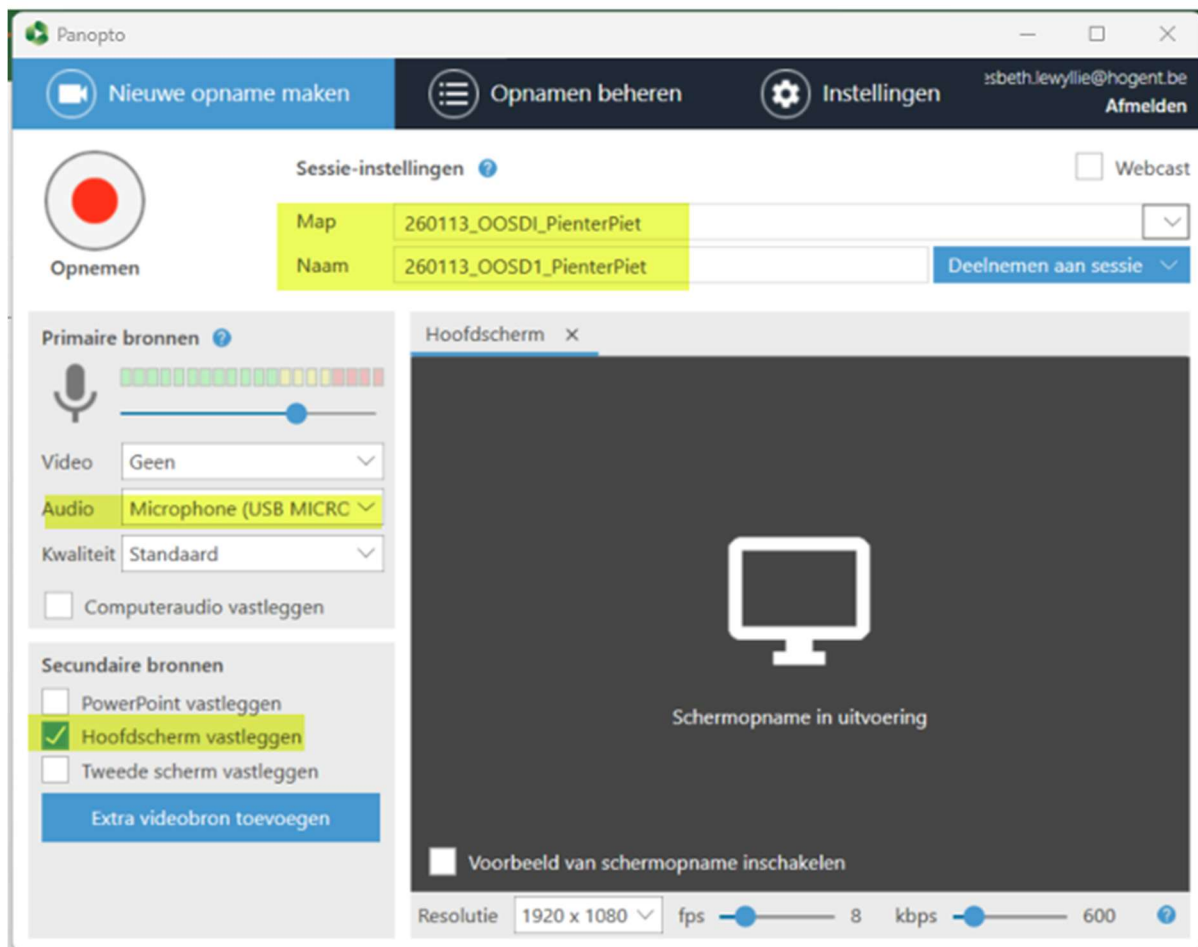

Starting the Recording

Start your recording **before** the exam begins and let it run until after you have made your final submission!

If there are problems with the recording, immediately contact the exam supervisor.

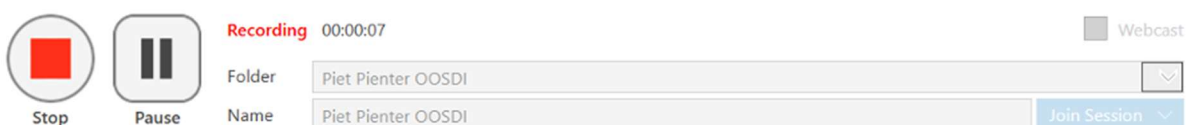

- Close all programs that are not explicitly permitted for the exam.
Collaboration is not allowed on a written exam. Don't forget to close these programs too!
 - Discord, Messenger, Slack, Steam, ... (chat/email applications).
 - OneDrive, Google Drive, Dropbox, ... (synchronization applications)
 → Read the course-specific guidelines carefully to know what is and isn't allowed!
- Open the Panopto desktop application (locally on your computer).
- Under **Folder**, select the correct folder for this exam (the one you already shared with the lecturer).
- Give your recording the same name as the folder under **Name**: **<YYMMDD>_<course>_<your surname firstname>**. You can optionally add part1 and part2 (if applicable).
- Under Primary Sources, select an **audio source** (no video).

6. Under Secondary Sources, check **Capture Main Screen**.

7. Press the red **Record** button.

8. Verify that the recording has started: it will show **Recording** and the timer will be running.

9. You are ready to begin the exam.

During the Exam

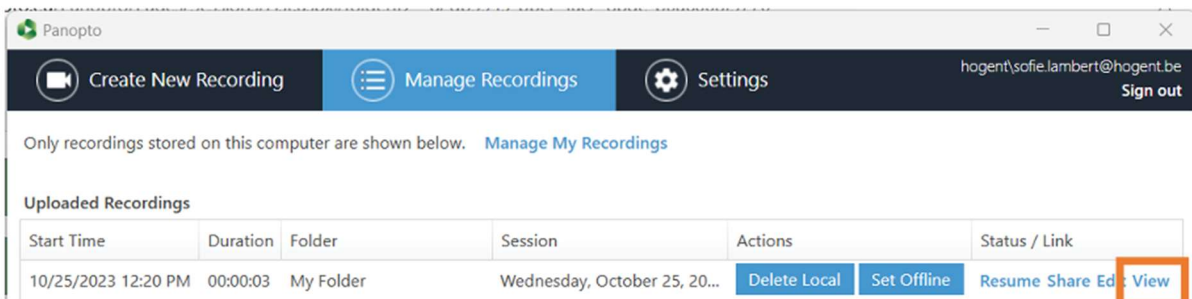

The Panopto recording keeps running the entire time.

Follow the exam instructions of the course carefully so you know what is and isn't allowed during the exam!

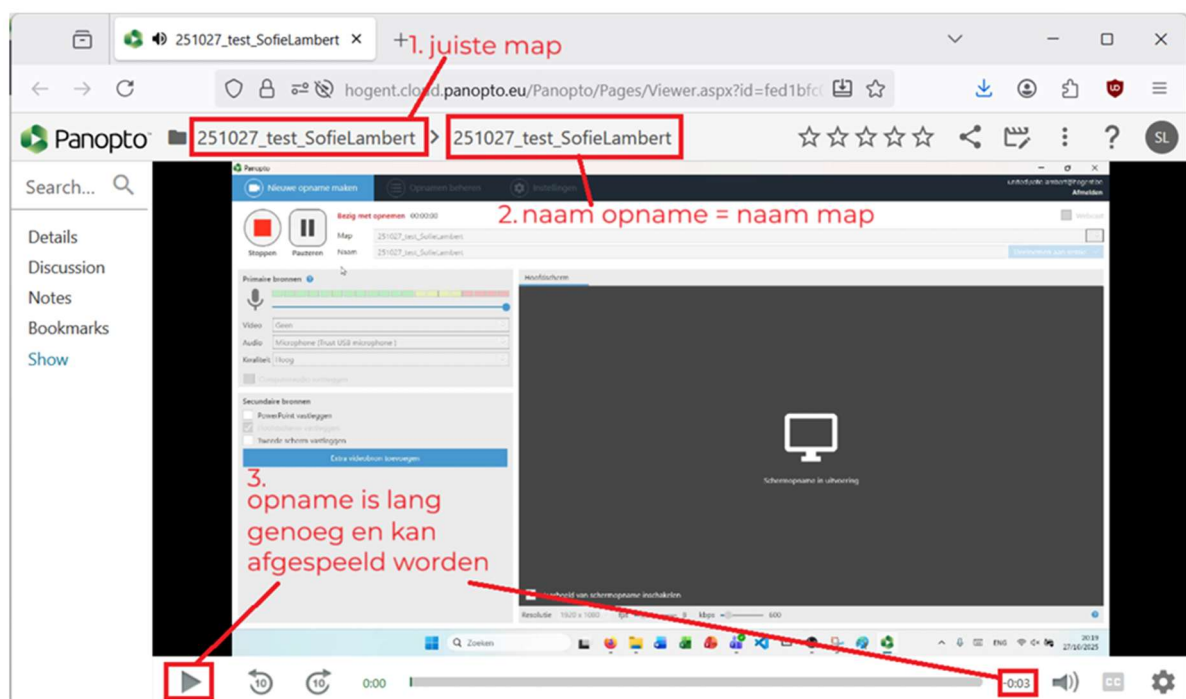

When You Have Made Your Final Submission and Want to Finish

1. Stop the recording by pressing the red button (**Stop**) in Panopto.

2. You will receive a confirmation of the recording; click **Done**.
3. You will automatically be taken to the **Manage Recordings** tab. Wait until the video has been uploaded. Click the **View** link.

4. This opens your recording in a browser window. Verify that everything is in order:

5. Once the video has been correctly uploaded to the Panopto platform, you may close everything.

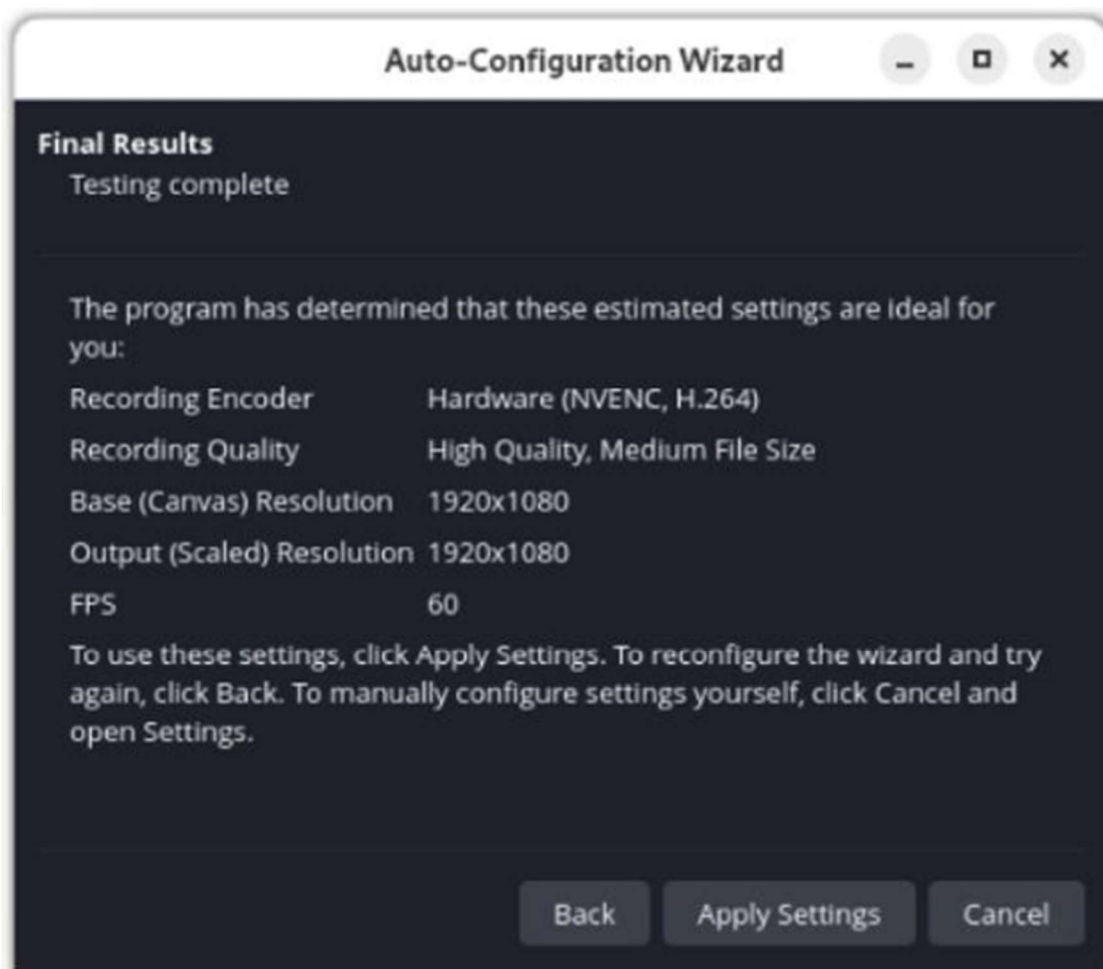

Alternative for Linux Users: OBS Studio

Panopto does not support Linux. The following instructions are a workaround based on OBS Studio that still allows you to participate in digital exams.

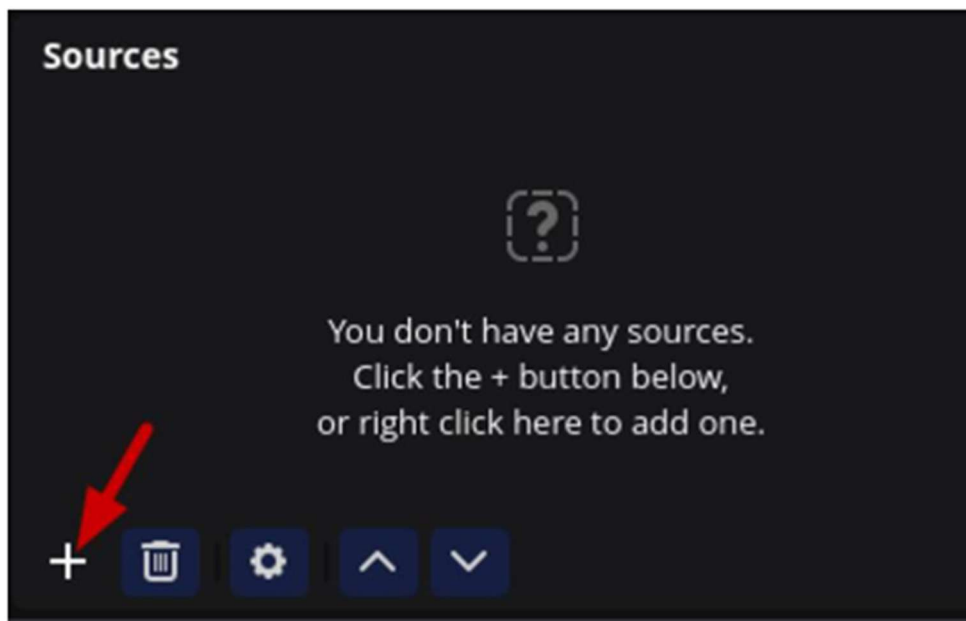

Note! We emphasize that it remains **your responsibility** to demonstrate that you completed the exam fairly. You cannot invoke any ambiguities in these instructions or deviations specific to your installation to justify why you did not submit the recording in the correct format. Try out the instructions in advance and make sure everything works well before participating in a digital exam! Lecturers cannot provide technical support for any problems.

1. Installation

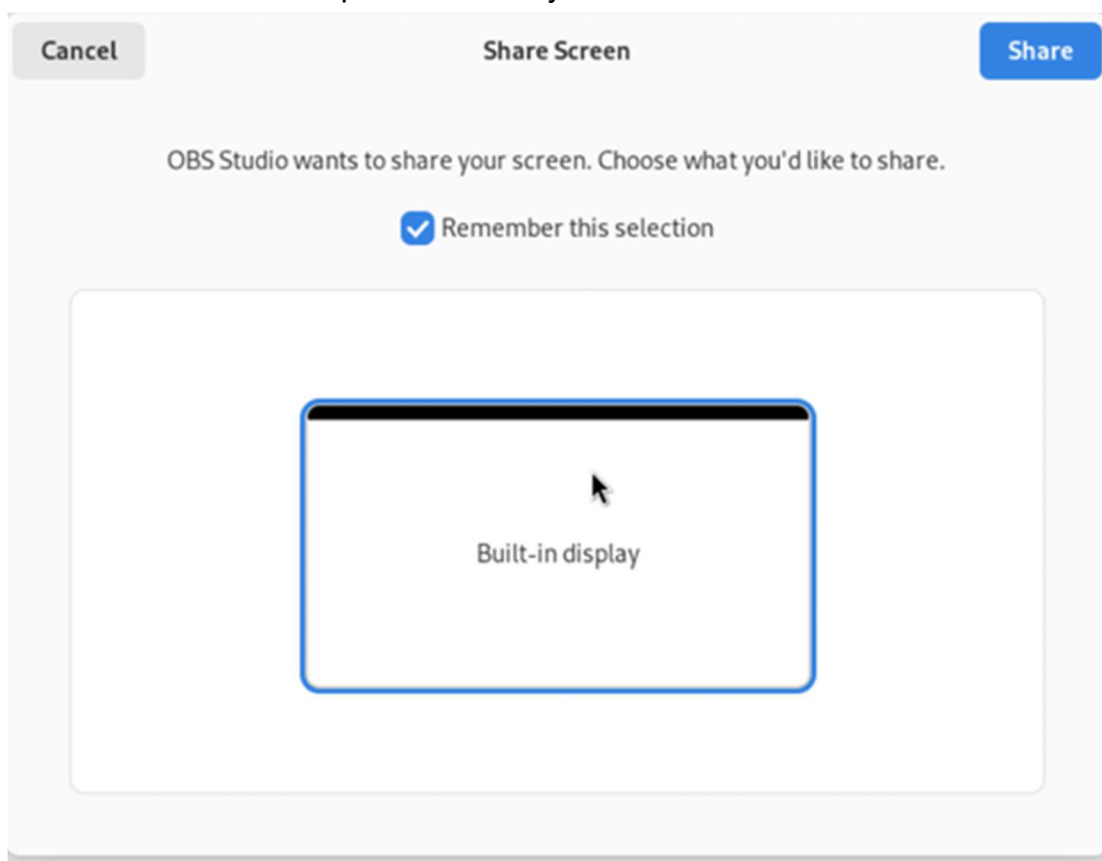

1. Install OBS Studio via your Linux distribution's package manager or the instructions on the website.
2. Launch OBS Studio and follow the **Auto-Configuration Wizard**:
 - o Choose **Optimize just for recording, I will not be streaming**.
 - o Confirm with **Next**.
 - o Base (Canvas) Resolution: **Use current** (your screen resolution).
 - o Leave other options at default, continue, and close the wizard with **Apply Settings**.

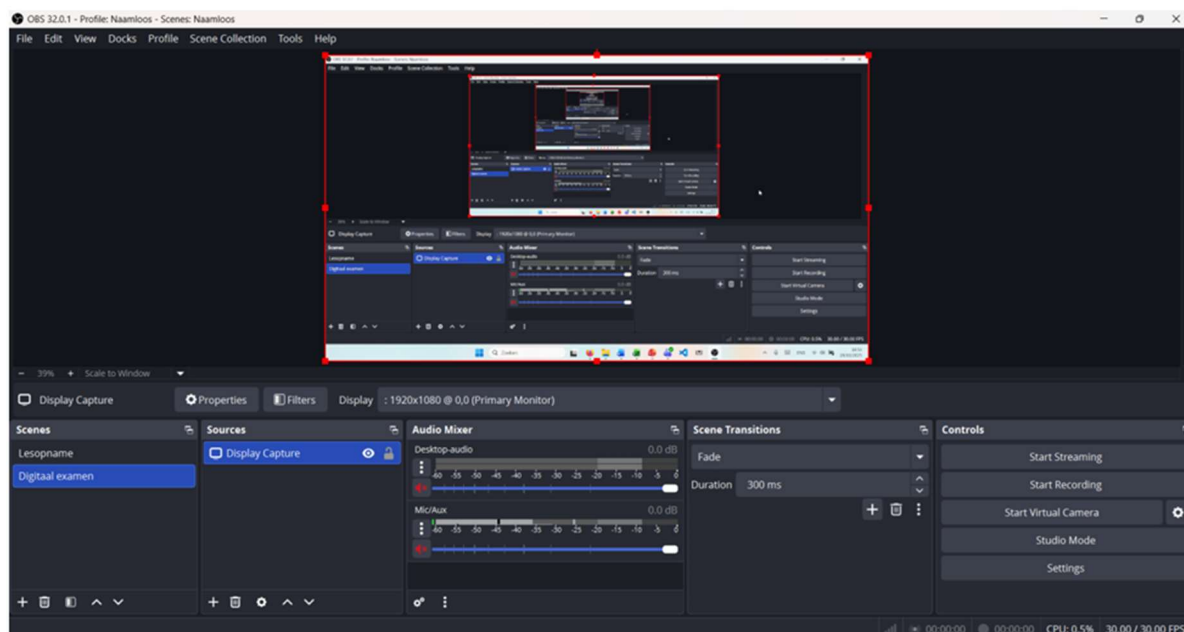

3. Define a **video source** by clicking the plus symbol at the bottom of the window under the **Sources** heading.

- Add a Screen capture to share your screen

4. In the main window, your screen capture should now be on the "scene". Optionally give this scene a name (bottom left), e.g. "Digital Exam". Make sure your screen is fully in frame (you can check this by clicking inside the scene; a red border will appear).

5. Via **Recording > Recording Path** you can set which directory recordings should be saved to.

2. After Installation: Make a Test Recording

Make a recording, upload it to Panopto, and verify that the image is correct.

Making the Test Recording

1. Press **Start Recording** at the bottom right of the OBS window. If you have a system tray, you should see an OBS icon there. You can also start a recording that way.
2. Stop the recording via **Stop Recording** in the main window or system tray.
3. Afterwards, find the recording in the folder you previously set. Check whether the recording was successful and whether it meets the requirements. The **full screen** must be **visible** and **readable** (sufficient resolution – the image must be **sharp**).
4. Adjust the settings if this is not the case!

Under **File > Settings > Output**:

- o Choose **H.264** as the Video codec. You may be able to use a hardware encoder (if your graphics card supports it), otherwise choose a software encoder (e.g. OpenH264 or x264).
- o Choose **AAC** as the Audio codec (default).
- o Choose **MP4** as the Recording Format.

Uploading the Test Recording to Panopto

1. Log in to Panopto and click the green **+ Create** button. Choose **Upload Media** and select the recording you just made.

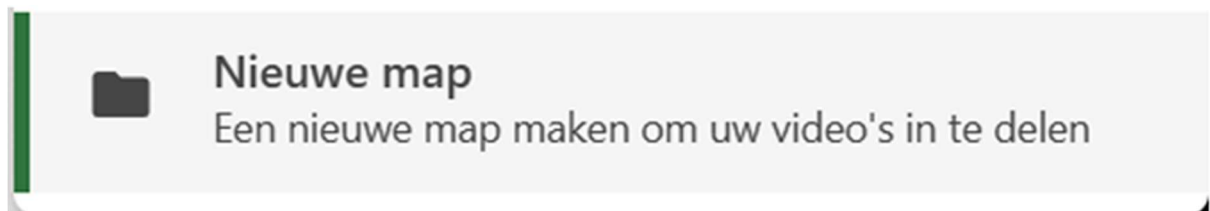

2. Verify that your recording has been correctly uploaded, that it can be played back in the Panopto web interface, and that the resolution is correct.

3. Preparation Before the Exam: Creating and Sharing a Panopto Folder

1. Go to <https://hogent.cloud.panopto.eu/>
2. Log in with your HOGENT credentials

3. Click on the **+ Create** button in the top left
4. Choose from the menu: **New Folder**

5. You will see the folder creation window

16. You may now close this window by clicking the X in the top right. The exam folder is ready.

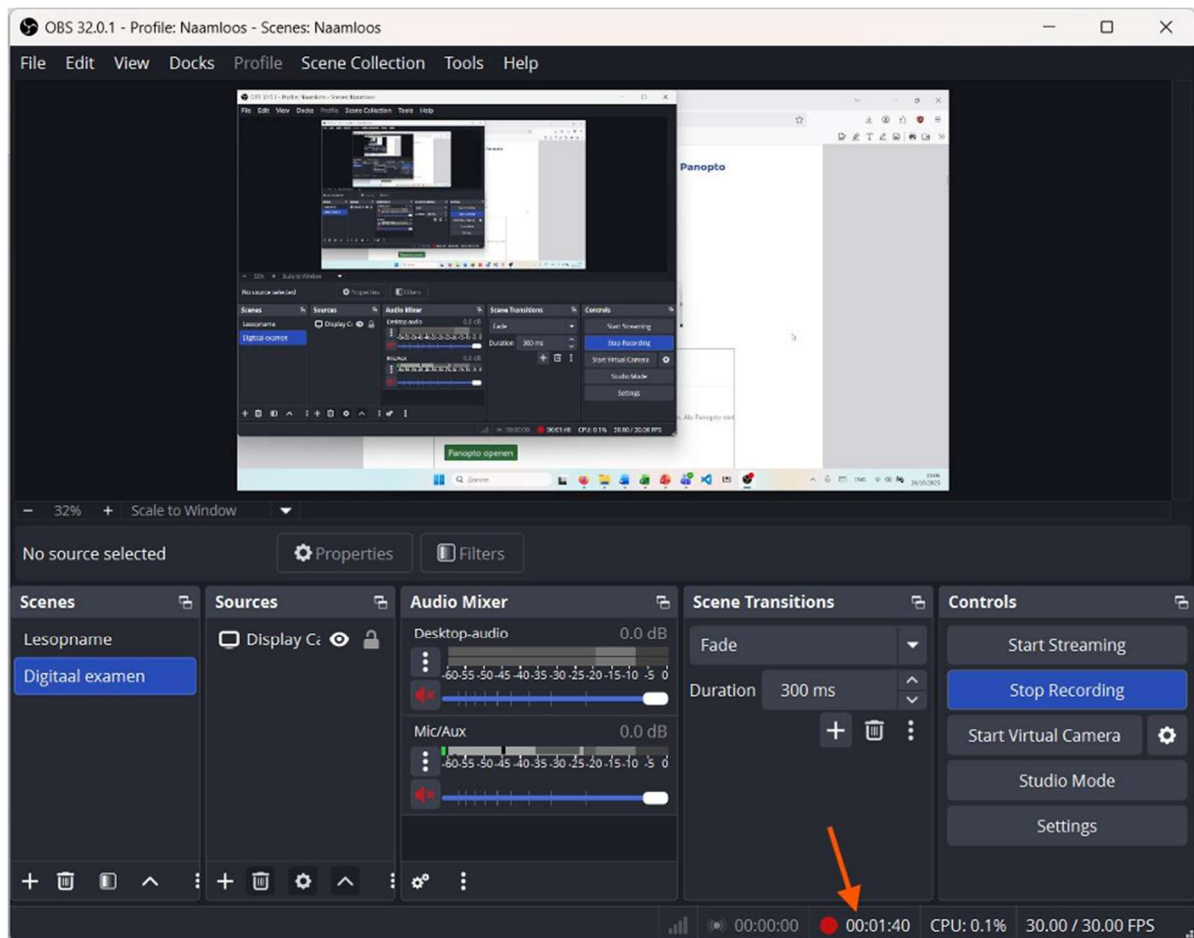

4. Recording the Exam

Starting the Recording

Start your recording **before** the exam begins and let it run until after you have made your final submission!

If there are problems with the recording, immediately contact the exam supervisor.

1. Close all programs that are not explicitly permitted for the exam. (See Section 1, point 4 for the list.)
2. Open OBS Studio.
3. Press **Start Recording** at the bottom right of the OBS window.
4. Verify that the recording is running: the **Stop Recording** button is blue and the timer is running.

5. You are ready to begin the exam.

During the Exam

The OBS recording keeps running the entire time.

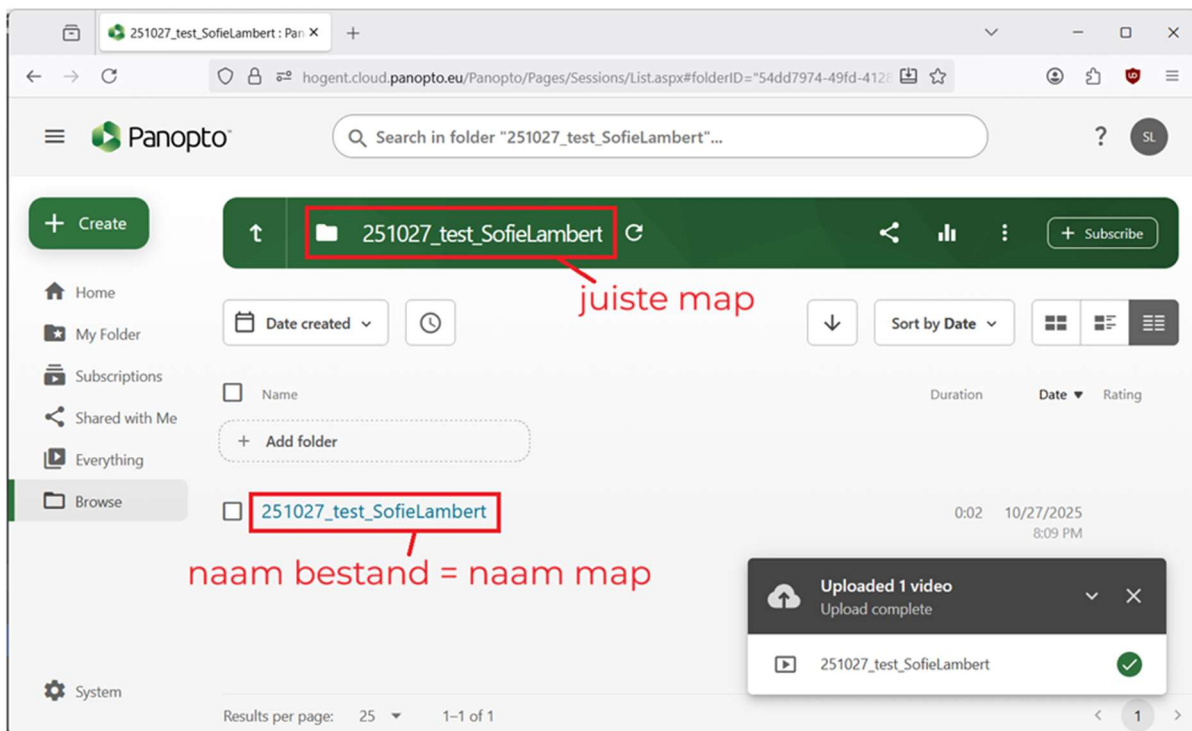

Follow the exam instructions of the course carefully so you know what is and isn't allowed during the exam!

When You Have Made Your Final Submission and Want to Finish

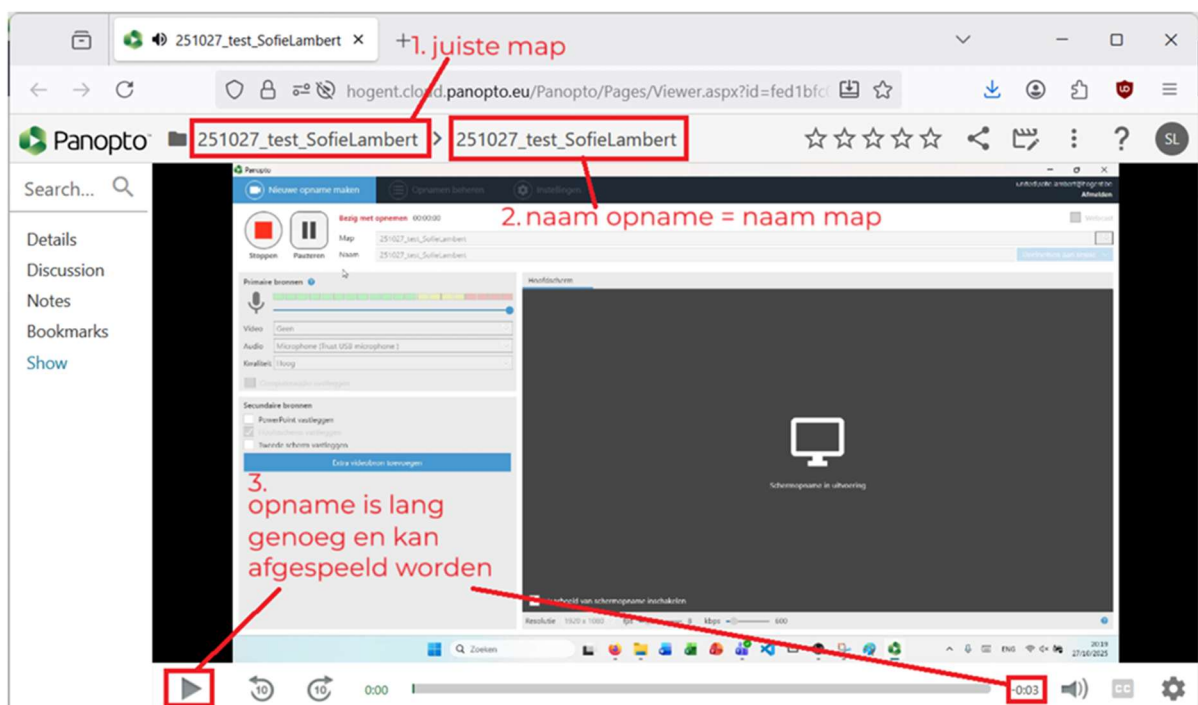

You must fully upload your recording to Panopto before leaving the exam room!

1. Stop the recording by pressing the blue button (**Stop Recording**) in OBS Studio.
2. Find the recording in the folder you previously set.
3. Rename the recording file so it has the same name as the folder you created in Panopto: **<YYMMDD>_<course>_<your surname firstname>**. You can optionally add part1 and part2 (if applicable).
4. Open Panopto in your browser and navigate to the folder you created for this exam.
5. Upload your recording by dragging it to the center of the window (or via the green **+ Create** button > **Upload Media**).

6. Verify that your file has been uploaded, that it is in the correct folder, and that it has the same name as the folder.

7. Click on the recording and verify that you can play it back in your browser and that it is long enough.

8. Once the video has been correctly uploaded to the Panopto platform, you may close everything.
